WHY DO WE DO SO MANY PRIMARY TRSA

Chairman: Joseph Iannotti

07:10 - 07:20

What are the current indications for an anatomic TSA and are the results better than reverse TSA for the same indications?
What would you have done for your shoulder if you needed a total shoulder replacement?

Eric Ricchetti

07:20 - 07:30

What are the current indications for a reverse TSA in an active patient with an intact rotator cuff under the age of 70?
What is an anatomic reverse TSA? What would you have done for your arthritic shoulder replacement with an intact rotator cuff?

Mark Alan Frankle

07:30 - 07:40

What are the reasons that primary reverse TSA in patients with an intact rotator cuff has become the operation of choice for so many surgeons? What is the limit of glenoid bone loss when an anatomic TSA is still indicated? Is a partial single tendon rotator cuff tear on MRI in a 70+ year old patient an indication for a reverse TSA?
